River Consulting and Loesche Energy Systems Partnership Turns Up the Heat

COLUMBUS, Ohio – River Consulting has boosted their ability to serve the North American power generation industry by joining forces with Loesche Energy Systems. The River and Loesche team of power industry experts unites four decades of worldwide innovation.

River's engineering expertise for power industry solutions complement Loesche's excellence in classifiers and coal mill application and pursuit of energy saving processes. With more than 100 years of experience in solid fuel processing and grinding, Loesche has the capability to design, plan and construct everything from individual machines to turnkey dry-grinding installations for coal, cement, lime and other minerals.

"This alliance partnership enables our two companies to combine Loesche's outstanding milling and classifying equipment with River's demonstrated ability to deliver project success to the power utility industry. Together, we can help our North American clients take advantage of Loesche technology that has been proven worldwide to improve the performance of fossil generation facilities," stated Gregory DiFrank, President of River.

"The establishment of such a strategic partnership between two world-class solution providers demonstrates both parties commitment to continually developing real solutions for the power market's everyday business challenges. Both parties are justifiably proud of this alliance and it's implication to the power industry in North America," stated Danny, Managing Director of Loesche Energy Systems.

This strategic business initiative adds milling system process engineering to River's existing power industry offerings, which include complete A/E services to specific solutions in Material Handling, Air Quality Control, and Controls and Instrumentation. Additionally, River will be representing Loesche's products to U.S. and Canadian power companies.

River Consulting delivers multidiscipline engineering and project management solutions for major capital projects and facility and process expansions. The firm's experience spans 28 years and 57 countries with offices in Columbus, Ohio; New Orleans, La.; Pittsburgh, Pa.; Houston, Texas; and Salt Lake City, Utah. River is recognized

nationally by Engineering News-Record as a Top 500 design firm and by ZweigWhite as one of the fastest growing A/E firm in the U.S. and Canada. Visit riverconsulting.com for more information.
